

TRONG TU LUU

UX Designer

+44 (0) 7424 248 605 | work.tuuhard@gmail.com | London, UK

tuuhyped.co.uk | github.com/Tuu01 | Right to work in the UK (no sponsorship required)

SUMMARY

UX designer with a Computer Science background who ships what he designs: research and prototyping through to a React build. Six years running booking and front-desk operations for a salon business mean the designs are grounded in workflows he has worked first-hand.

EXPERIENCE

Product Design & Digital Operations

Oct 2019 - Present

The Nail Fairy

Bradford, UK

- Designed and shipped nailfairy.co.uk, the salon's booking platform, owned end to end from user flows to deployment and now live for two locations
- Ran end-to-end booking and payment operations, so the front-desk workflows the product serves are first-hand rather than researched
- Set up Google Business search visibility, a review-collection workflow, and the salon's photo and video content

EDUCATION

Queen Mary University of London

London, UK

MSc Computer Science

Sept 2025 - Present

City, University of London

London, UK

BSc (Hons) Computer Science, 2:2

Sept 2021 - Sept 2025

Relevant coursework: Interactive Systems Design (Distinction), Interactive Design, Data Visualization, Machine Learning, Databases

SELECTED UX PROJECTS

Badminton Queue: live club match-running app | *Product Design, Heuristic Evaluation, Next.js, TypeScript*

2026

- Sole designer and developer of a live app used by a ~30-member club; the engine scores all 210 possible games in about a third of a millisecond to pick fair, evenly matched teams
- Validated the fairness model by simulation before launch: adding gender-category matching lifted proper doubles from 37% to 99.8%, with no measurable loss of playing time
- Users could not follow the flow after launch; a heuristic evaluation across 16 screens and 3 permission tiers drove ~20 small reversible releases. Argued down a cosmetic reskin; declined public win-rate rankings on trust grounds

AI-Generated Video Platform for Restaurants | *UX Research, Interaction Design, Figma*

2026

- MSc group project with Splento (Interactive Systems Design, awarded Distinction): user-centred design for a mobile-first platform to discover, adapt, and license promotional video
- Designed the final prototype, which shaped the project's design direction; contributed interviews, personas, and comparative usability evaluation across a team of 5

Salon Booking Platform | *Interaction Design, React, Node, MongoDB, Stripe*

2025-2026

- Designed a four-step mobile-first sequence (location, service, time, confirm) with guest checkout, removing the account-creation step that phone bookings never asked for
- Admin dashboard built around the front desk: calendar and table views, manual booking for phone and walk-ins, role-restricted accounts, and atomic slot tracking that blocks concurrent overbooking

SKILLS

Design: User research, interviews, usability testing, heuristic evaluation (Nielsen/Norman), personas, journey mapping, wireframing, prototyping, Figma

Development: React, JavaScript, HTML & CSS, Tailwind, Node, Python, C#, SQL

Tools: Git & GitHub, VS Code, IntelliJ
